Mobile Health What Works?

7 May 2012 | Bella Center, Copenhagen, Denmark

Mobile Health devices are dramatically changing the traditional healthcare settings as we know them, but how does one navigate in the rapidly expanding market of mobile health devices? What works and what doesn't? The eHealth week Mobile Health symposia will focus on worldwide examples of best practices, how are the devices being used, what to expect from the transition period, and how efficient are they?

The symposia will concentrate on:

- Return on Investment
- Business Cases
- Usability
- How to successfully incorporate data from mobile health devices into an EPJ
- How to effectively share data between the home and the hospital
- Best practice examples

Price to attend the symposia – €199

Spaces are limited and seats are selling out so we encourage you to register now! www.eHealthweek.org

Organised during:
